Our Pillars of Sustainability

Best Aquaculture Practices is the world’s most comprehensive third-party aquaculture certification program, addressing all of the components necessary to conduct aquaculture operations in a responsible and sustainable manner.

- **Environmental Responsibility**
  Compliance with standards that address such issues as habitat conservation, water quality and effluents.

- **Animal Health & Welfare**
  Best practices in animal husbandry, addressing such issues as disease control.

- **Social Accountability**
  Ensuring producers are following best practices in human rights, labor laws, and employee health and safety.

- **Food Safety**
  Assurance that no banned antibiotics or other chemicals are used and that all approved chemical treatments are carried out in a responsible fashion.

- **Traceability**
  BAP has a chain-of-custody traceability process that’s an integral part of the program.
